Scenter: Spreading Words in a Region

-- a Geofencing Platform for Microblogging

David Fink, Denis Savenkov, Yu Wang Emory University

Motivations and System Design

As a content provider:

Share a message to a region, to someone you may not know.

Influence news feed in an area.

As a content consumer:

See what's going on nearby.

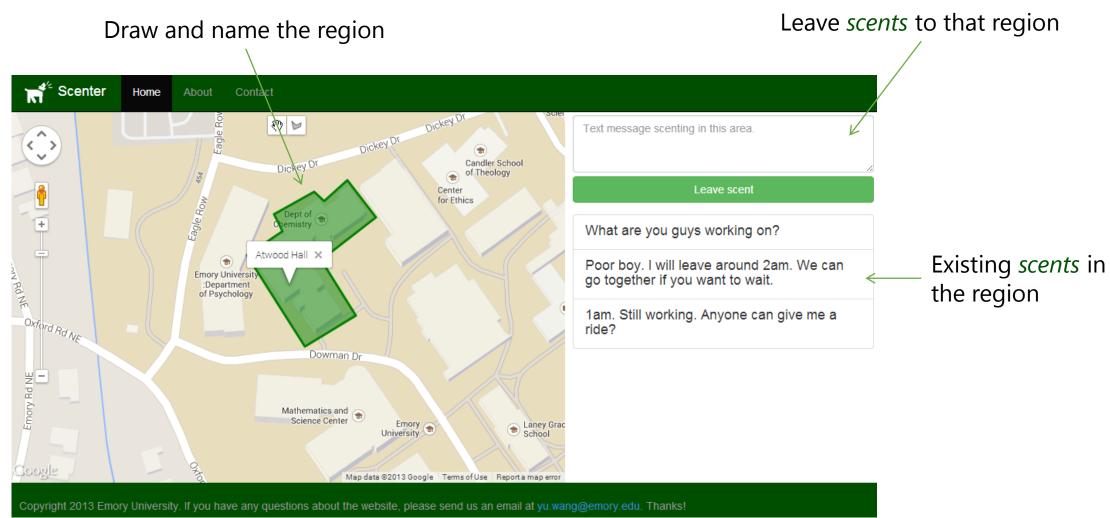

Website: create a region, send messages

Mobile: detect regions, receive messages

Create a region, leave a scent – Web client

Check out What's going on Nearby – Mobile client

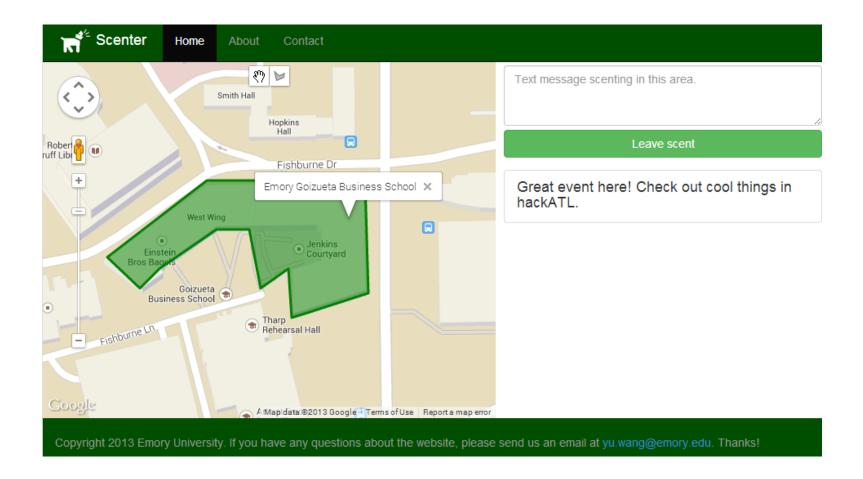

Scents nearby

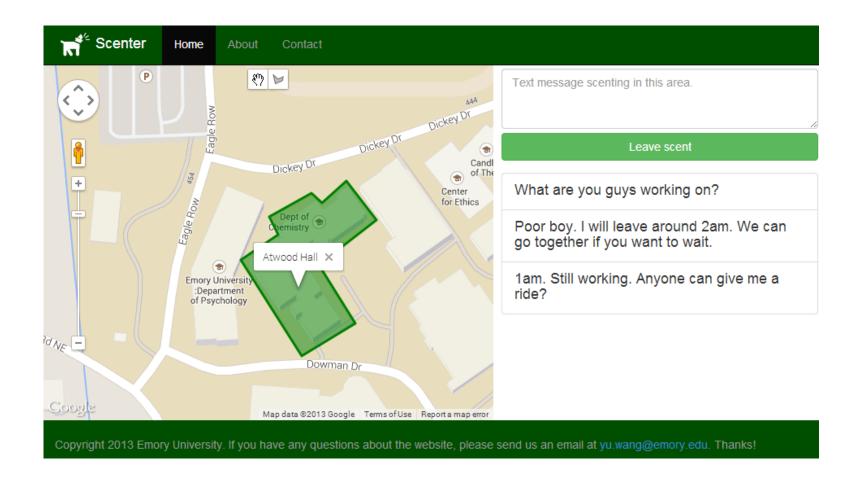

Scents from the same region

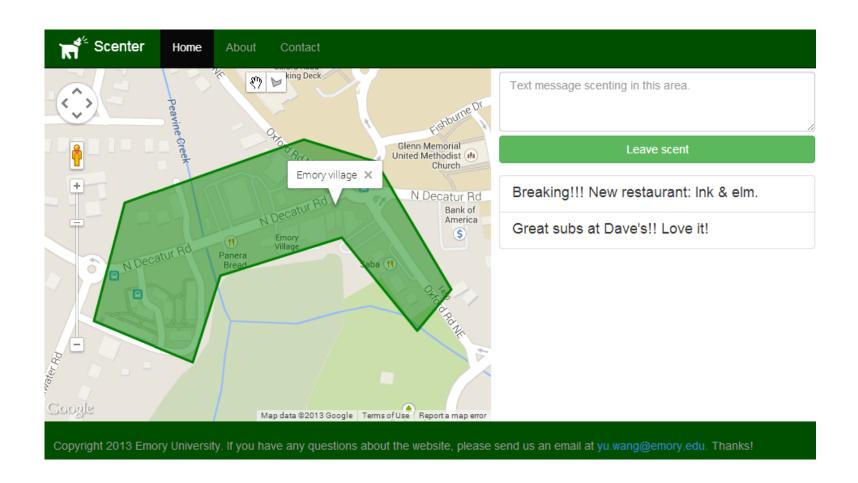

Use cases — Events

Use cases – Local chats

Use cases – Local business

Scenter: a Geofencing Platform for Microblogging

- Monetization plan:
 - Businesses pay for featured scents.
 - Businesses pay to the users who carry commercial scents to other area.
 - Businesses pay to create large regions.
- Chatting with people nearby.
- Meeting with new people.
- Promoting and discovering local events and news.

Happy Scenting
